. . Category: Bass guitars Serum microRNA-1246 is a novel biomarker for diagnosis of central nervous system diseases. MicroRNAs (miRNAs) are a class of non-coding single-stranded RNAs about 19-24 nucleotides in length that play important roles in various biological processes. It has been reported that miRNAs can be secreted into the extracellular fluid, implying the possibility of circulating miRNAs as biomarkers for disease diagnosis. miRNA-1246 (miR-1246) has been reported to be a promising biomarker of cancer, but its potential role in central nervous system diseases is still unknown. We first found that serum levels of miR-1246 were significantly upregulated in patients with multiple sclerosis (MS), Parkinson's disease (PD), and stroke, but not significantly changed in Alzheimer's disease (AD) and amyotrophic lateral sclerosis (ALS), compared with healthy controls (HCs). Subsequently, we validated the expression of serum miR-1246 in various neurodegenerative disorders by real-time quantitative polymerase chain reaction (qPCR). Serum miR-1246 was also significantly elevated in patients with high-risk subtype of AD and vascular dementia compared with the HCs. The receiver operating characteristic curve analysis of these neurodegenerative diseases indicated that the area under the curve for serum miR-1246 was 0.85 (95% confidence interval [CI]: 0.81-0.89, P < 0.05). Overlapping page in HTML 5 offline mode I am using html 5 offline mode. In the book it says page should not overlap each other. I do not understand how to make it overlap. If you could help me to understand, I would be grateful. A: You can use CSS media queries to shrink the size of the page. .page { background-color: #82157476af
